

Individual Teaching Reflections

Based on *feedbacks*:

- The lecture's pacing was good and organization was logical.
- The lecture's content was clear and easy to understand.
- The introduction was well motivated.
- 2/15 commenters pointed out that the introduction is a little bit vague which made the students confused and did not know the exact answers I would like to hear. As for this part, my intention was to introduce hypothesis testing, student did not need to know this concept before answering my questions. But I will try to make the introduction example more clear and straightforward.
- I should involve more student interactions. Always leave time for students to ask questions and provide their thoughts.
- Try to use more visuals or techniques to make the lecture vivid.

Based on *recording*:

- Talk more and Practice more to avoid grammar mistakes and pronunciation errors.
- According to the introduction example part, I noticed I have given hints of the questions I asked, maybe next time, I should make more explanations rather than just give a direct hint, let the students think and explore more.
- Leave more time for student's questions of the lecture and answers to my questions.
- Include more visuals and techniques to help with the understanding.
- Make preparation before the lecture to reduce the probabilities of facing technical problems. When facing some inevitable situations, try to be calm and assign students some activities related to the lecture.
